## CONTAINERIZING THE APPLICATION:

The screenshot shows the Docker Desktop application window. The title bar includes 'Docker Desktop', an 'Update to latest' button, and a user profile 'arunkumar'. The left sidebar contains navigation options: 'Containers' (selected), 'Images', 'Volumes', 'Dev Environments' (with a 'BETA' badge), 'Extensions' (with a 'BETA' badge), and 'Add Extensions'. The main panel is titled 'Containers' and includes a 'Give feedback' link. Below the title, a descriptive sentence states: 'A container packages up code and its dependencies so the application runs quickly and reliably from one computing environment to another. [Learn more](#)'. A toggle switch labeled 'Only show running containers' is currently turned on. A search bar is located to the right of the toggle. Below these elements is a table of containers. The table has columns for a checkbox, NAME, IMAGE, STATUS, PORT(S), STARTED, and ACTIONS. One container is listed: 'kind\_saha' with ID '90dd6397eafd', image 'app:latest', status 'Running', ports '5000:5000', and started '7 seconds ago'. The bottom status bar shows system metrics: 'RAM 3.38GB', 'CPU 4.07%', and 'Connected to Hub', along with the version 'v4.13.0'.

Docker Desktop Update to latest arunkumar

**Containers** [Give feedback](#)

A container packages up code and its dependencies so the application runs quickly and reliably from one computing environment to another. [Learn more](#)
